

## Nationwide Safety & Healthcare Training

Welcome to Safety Ireland established in 2001, one-stop shop for all your Health & Safety requirements. In today's highly regulated and legislated environment, it's never been more important to make health and safety an integral part of everyday life.

At Safety Ireland, we have everything you need to create for Healthcare & Safety – expert advice, full Safety Training, Risk Assessments, Safety Statements, Medical and Safety equipment. We provide our training both in-house or at our state of the art training centre in the Terenure. Some of the training courses we offer include Manual Handling, Patient Moving and Handling, VDU Assessment, Occupational First Aid, Occupational First Aid Instructor, Fire Safety, Health and Safety for Managers, Working Safely and Managing Safety (IOSH) Forklift Training, Irish Heart Foundation Provider and Instructor Training.

All our fulltime staff are experts in the field of Healthcare & Safety. This means that we can bring realistic training, relating real life events to the class room situation. With full recognised Instructors by the Irish Heart Foundation, Pre-Hospital Emergency Care Council, Health & Safety Authority, and other national and international organisations.

Safety Ireland is the sole authorised distributor for Defibtech LLC defibrillator products in Ireland.

Defibtech, LLC is a leading innovator in the field of Automated External Defibrillators (AEDs). The company designs and manufactures the award-winning, FDA-cleared, Lifeline™ and ReviveR™ brands of defibrillators and related accessories. Our products are sold exclusively through a network of distribution partners in the United States and around the world. Defibtech is headquartered in Guilford, Connecticut and manufactures all of its defibrillators in the United States in state-of-the-art ISO 13485:2003 certified facilities.

Defibtech's proximity to New Haven, CT, coupled with the company's strong Ivy League roots, gives us access to a great resource in Yale University. Defibtech continues to work with faculty from both the Engineering departments and the Yale School of Medicine to bring you the best defibrillator products anywhere. Defibtech's founders (both graduates of Yale University) have a great deal of medical device design experience and have founded other high-tech companies. Defibtech was founded on the philosophy of putting together a truly exceptional team to relentlessly pursue one goal: creating and manufacturing the best AEDs in the world.

Our engineers have extensive medical device design experience and also, just as importantly, high-tech high-volume consumer product development experience. The members of our team have developed hospital equipment (e.g., arrhythmia detection algorithms, ultrasound imaging equipment, filmless x-ray systems, blood flow monitors, trans-telephonic defibrillators), implantable and invasive medical devices (e.g., heart valves, catheters), military technology (e.g., rocket ultrasound inspection systems), consumer products (e.g., high-end audio equipment, consumer phones), and commercial products (e.g., phone company central office electronics, ultra-high speed image processing systems).

Defibtech is committed to continuing to provide exceptional real-world AED products at affordable prices. We believe our design, manufacturing, support, and sales teams are the best in the business. We are proud to let our products speak for themselves.
